

EXPERIMENT 8a

Thivyaa P 240701570

Aim

To create storyboards representing the user flow of a mobile food delivery application using Balsamiq.

Introduction

Storyboards help in visualizing how users interact with an application step by step. They show the sequence of screens and user actions required to complete a task.

In this experiment, a storyboard is designed for a food delivery application to represent the complete process from searching restaurants to placing an order. This improves understanding of navigation flow and user experience.

Procedure

Step 1: Define User Flow

- Identified key screens such as Home, Restaurant Menu, Food Details, Cart, Checkout, and Order Confirmation
- Planned the user journey from searching food to completing the order

Step 2: Create Wireframe Screens

- Designed screens using basic UI components like buttons, text fields, and icons
- Included navigation bar, search bar, and product listings
- Maintained simple and clear layout for better understanding

Step 3: Design User Flow Screens

Home Screen

- Displays search bar for restaurants or food
- Shows offer banners and categories
- Lists popular restaurants with ratings and delivery time

Restaurant Menu Screen

- Displays restaurant details such as name, cuisine, and rating
- Shows menu categories like appetizers and main course
- Includes “Add” button to add items to cart

Food Item Details Screen

- Displays food image, name, and price
- Includes description of the food item
- Provides quantity selector and “Add to Cart” button

Cart Screen

- Displays selected food items with quantity and price
- Shows subtotal, delivery fee, and total amount
- Includes “Proceed to Checkout” button

Checkout Screen

- Displays delivery address details
- Provides payment options like UPI, Card, and Cash on Delivery
- Shows final order summary

Order Confirmation Screen

- Displays confirmation message after successful order
- Shows estimated delivery time
- Provides order summary and tracking option

Step 4: Connect and Finalize Flow

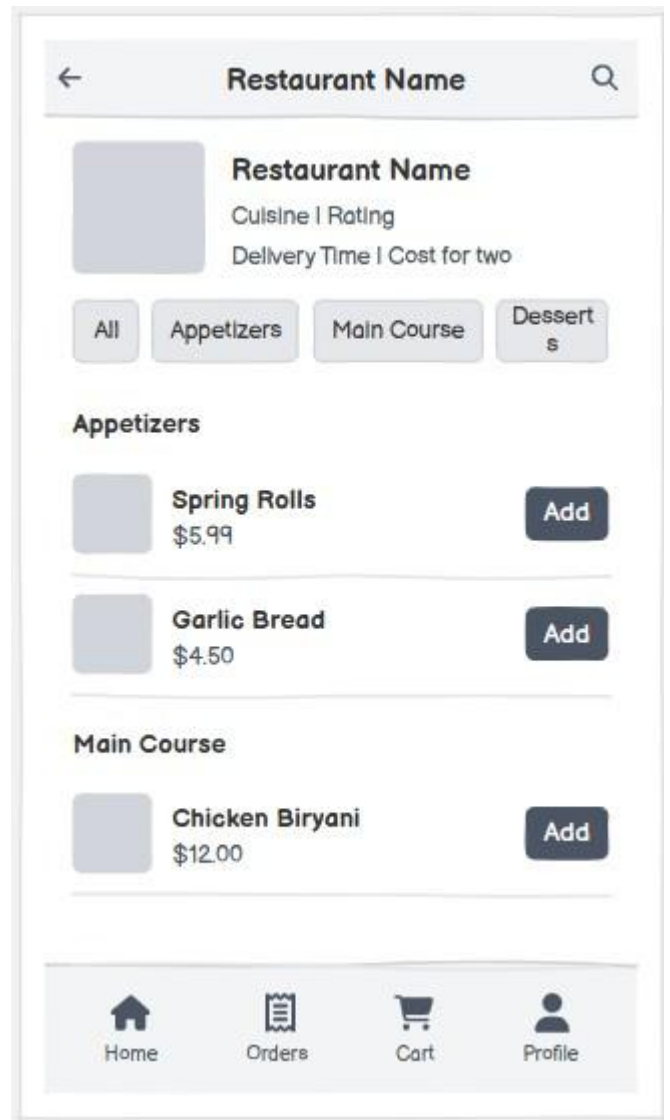

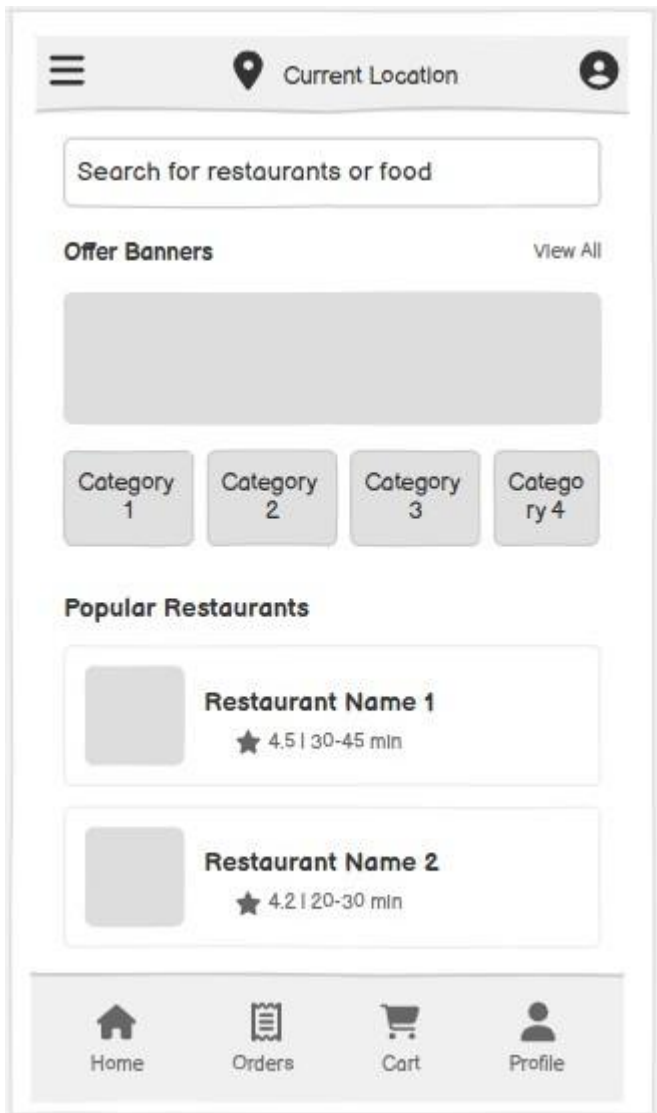

- Arranged all screens in sequence
- Connected them to represent user navigation
- Verified complete flow from Home → Order Confirmation
- Ensured smooth and logical user interaction

User Flow

Home → Restaurant Menu → Food Details → Cart → Checkout → Order Confirmation

Result

The storyboard successfully represents the complete user journey of a food delivery application. It helps in understanding navigation flow and improves usability and user experience.

Food Item Details

Food Item Name

\$35.00

A delicious description of the food item, highlighting its ingredients and unique flavors. This section can be longer to provide more details about the dish.
