

EXPERIMENT — 8b

Thivyaa P 240701570

Create Storyboards to Represent the User Flow for a Mobile App Using OpenBoard

AIM

The aim of this experiment is to map out the complete user flow for a Healthcare mobile application (MediCare+) by designing storyboards using OpenBoard. The storyboards visually represent each screen of the application and the navigation transitions between them, helping communicate the intended patient experience from login to accessing health records.

Tool Used

- OpenBoard – for creating digital storyboard frames and flow diagrams
- Paper and Pen – for initial user flow sketches
- Tool Link: <https://openboard.ch/download.en.html>

PROCEDURE

Step 1: Define the User Flow

1. Identify Key Screens:

The MediCare+ healthcare app requires the following main screens to support the complete patient experience:

- Login / OTP Screen – Mobile number entry, OTP verification, and Google login option.
- Home Dashboard – Health summary card, quick access icons, upcoming appointments, and health tips.
- Find a Doctor Screen – Search bar, specialty filter tabs, and doctor listing cards.
- Book Appointment Screen – Doctor summary, date picker, time slot selector, visit type, and confirm button.
- Pharmacy Screen – Medicine search, prescription upload option, and popular medicines listing.
- Health Records Screen – Filter tabs, health metrics summary, and downloadable report list.

2. Map the User Journey:

A typical patient user of the MediCare+ app goes through the following journey:

- Patient opens the app, enters their mobile number, and verifies via OTP on the Login Screen.
- After login, the Home Dashboard shows a health summary, upcoming appointments, and quick access.
- Patient taps "Doctors" to navigate to the Find a Doctor Screen and filters by specialty.
- Patient selects a doctor and taps "Book Now" to open the Book Appointment Screen.
- Patient selects preferred date, time slot, and visit type (In-Clinic / Video) and confirms.
- Patient navigates to the Pharmacy Screen to search for medicines or upload a prescription.

- Patient views Health Records to access lab reports, prescriptions, and health metrics.

Step 2: Create Storyboards Using OpenBoard

1. Install OpenBoard: OpenBoard was downloaded from the official website (<https://openboard.ch/download.en.html>) and installed on the system. A new blank whiteboard document was created to begin the storyboard.

2. Create a New Document: OpenBoard was launched and a new document was created. The canvas was set to landscape orientation to allow side-by-side frame layout for the storyboard.

3. Add Frames for Each Screen: A separate frame (rectangular boundary) was drawn for each key screen of the MediCare+ – Healthcare App using OpenBoard's rectangle shape tool. Each frame was sized to represent a mobile phone screen with a header and footer area. Six frames were created in total, arranged in two rows of three.

4. Sketch Each Screen: OpenBoard's pen tool was used to sketch the basic UI layout inside each frame. Key UI components were drawn for each screen including buttons, input fields, cards, icons, and navigation bars. Labels were added using the text tool to identify each component.

5. Organise the Flow: The frames were arranged in sequence from left to right, top to bottom, to represent the logical user journey through the application. Flow arrows were drawn between frames using OpenBoard's line and arrow tools to indicate navigation transitions triggered by user actions.

Screen Descriptions

Screen 1: Login / OTP Screen

The Login Screen provides secure access to the MediCare+ application. The MediCare+ logo and tagline ("Your Health, Our Priority") are displayed at the top. A mobile number input field is followed by a "Send OTP" button. A Google login alternative is provided. The OTP Verification section below shows four input boxes for the 4-digit OTP. A "Verify & Login" button completes the authentication. A resend timer and a registration link are shown at the bottom.

- Mobile number field with Send OTP button
- Google OAuth login option
- Four-digit OTP input boxes with countdown timer
- Verify & Login button and Register link

Screen 2: Home Dashboard

The Home Dashboard provides a personalised health overview. A greeting and date are shown at the top. A "Your Health Summary" card displays current BP reading and heart rate with status indicators. A Quick Access row shows icon shortcuts for Doctors, Pharmacy, Ambulance, and Lab Tests. An Upcoming Appointment card shows the next scheduled appointment with doctor name, specialty, and date/time. A Health Tips section at the bottom shows a daily wellness tip.

- Health summary card: BP, heart rate with status
- Quick access: Doctors, Pharmacy, Ambulance, Lab Tests
- Upcoming appointment card with View button
- Daily health tip section

Screen 3: Find a Doctor Screen

The Find a Doctor Screen allows patients to search for specialists. A search bar accepts doctor names or specialty keywords. Specialty filter pills (All, Cardiology, Neuro, Ortho, ENT) are displayed for quick filtering. Each doctor card shows the doctor's name, specialty, experience, star rating, consultation fee, and two action buttons: "Book Now" and "Profile".

- Search bar for doctor name or specialty
- Specialty filter pills
- Doctor cards with name, specialty, experience, rating, fee
- Book Now and Profile action buttons

Screen 4: Book Appointment Screen

The Book Appointment Screen enables patients to schedule a consultation. A doctor summary card at the top shows the selected doctor's photo placeholder, name, specialty, rating, and hospital. A date row shows the next five available dates as selectable tiles. Below it, time slots are displayed as a grid of available time options. Visit Type selection (In-Clinic or Video Call) is provided. The "Confirm Appointment" button finalises the booking.

- Doctor summary card
- Horizontal date selector (next 5 days)
- Time slot grid with available slots
- Visit type: In-Clinic / Video Call toggle
- Confirm Appointment button

Screen 5: Pharmacy Screen

The Pharmacy Screen allows patients to order medicines digitally. A search bar supports medicine and vitamin searches. An "Upload Prescription" banner in green prompts users to upload a doctor's prescription for home delivery within 2 hours. A Popular Medicines section below lists common medicines with image placeholder, name, package info, price, and an Add to Cart button.

- Medicine search bar
- Upload Prescription banner for prescription-based orders
- Popular medicines list: name, package, price, Add button
- Bottom navigation for easy section switching

Screen 6: Health Records Screen

The Health Records Screen gives patients centralised access to their medical history. Three filter tabs — Reports, Prescriptions, and History — allow switching between record types. A Health Metrics section shows a mini dashboard of recent BP, blood sugar, and weight readings with progress bar indicators. A Recent Reports list displays each report with title, type, date, and a status badge (Normal/Clear), along with a Download button for each entry.

- Filter tabs: Reports / Prescriptions / History
- Health metrics: BP, sugar, weight with progress indicators
- Report cards: title, type, date, status badge
- Download button for each report

Storyboard Output — OpenBoard Screens

The following storyboard frames show the complete user flow for the MediCare+ – Healthcare App. Each frame represents a screen, and the arrows between frames indicate user actions and navigation transitions.

Fig 1: Storyboard Frames 1–3 — Login/OTP → Home Dashboard → Find a Doctor (with flow arrows)

Fig 2: Storyboard Frames 4–6 — Book Appointment → Pharmacy → Health Records (with flow arrows)

User Flow Summary

The complete user flow for the MediCare+ Healthcare App is summarised below. The storyboard frames follow this sequence, with flow arrows indicating the user action that triggers each screen transition:

Step	Screen	User Action	Next Screen
1	Login / OTP Screen	Enter OTP and tap Verify	Home Dashboard
2	Home Dashboard	Tap "Doctors" quick access icon	Find a Doctor Screen
3	Find a Doctor	Tap "Book Now" on a doctor card	Book Appointment Screen
4	Book Appointment	Select slot and tap Confirm	Confirmation (Dashboard)
5	Home Dashboard	Tap "Pharmacy" quick access icon	Pharmacy Screen
6	Home Dashboard	Tap "Health Records" from menu	Health Records Screen

Result

The experiment was completed successfully. A complete user flow storyboard for the MediCare+ Healthcare App was created using OpenBoard. Six screens were designed — Login/OTP, Home Dashboard, Find a Doctor, Book Appointment, Pharmacy, and Health Records — and arranged in sequence with flow arrows. The storyboard clearly communicates the patient journey from authentication to accessing medical records and booking consultations.

Conclusion

Storyboarding using OpenBoard proved to be an effective method for visualising the user flow of a complex healthcare application. The MediCare+ storyboard demonstrates how a patient navigates through authentication, health monitoring, doctor discovery, appointment booking, medicine ordering, and record access in a coherent and logical flow. The use of flow arrows between frames made the navigation transitions explicit and easy to understand for all stakeholders. This experiment highlights the importance of storyboarding as an early-stage design activity that reduces ambiguity and improves the quality of the final product.
